lung disease

**PARI COMPACT2** – Tips for use and hygiene

[www.pari.com](http://www.pari.com)

## Usage tips

1. Wash your hands thoroughly before each inhalation session.

2. Detach the inspiratory valve from the nebuliser.

3. Pour in the inhalation solution.

4. Attach the inspiratory valve and mouthpiece or mask. When using a mask read the nebuliser instruction for use.

5. Connect the nebuliser and compressor with the connection tubing. Connect the compressor to the mains power supply.

6. Sit upright in a relaxed position and switch on the device.

7. Hold the mouthpiece between your teeth and close your lips around it.

8. Breathe in through the mouthpiece slowly and deeply, then breathe out in a relaxed manner. When a different noise comes from the nebuliser, this indicates that nebulisation has finished.

9. Switch off device. Disconnect the nebuliser from the tubing. Switch the device back on to dry the tubing.

10. Disconnect the power plug.

## Hygiene tips

1. Disassemble the nebuliser after each use and **wash** all individual parts in warm water with dishwashing liquid, before rinsing thoroughly in running water.

2. **Disinfect** the nebuliser once a day for 5 minutes in boiling water or for at least 6 minutes in a standard commercial disinfectant, such as one designed for baby bottles.

3. After every cleaning and/or disinfection, place the parts on a dry, clean, absorbent surface and allow to **dry** completely.

4. **Store** all components them in a dry, dust-free place.

5. Air filter, nebuliser and connection tubing should be **replaced** every year. These components are included in the **PARI Year Packs**, which are available from your PARI dealer. Components may have to be replaced sooner if they are damaged or if contamination cannot be removed.
